

General Description

The FTR MONITOR control is designed to provide an attractive and functional means of switching the FTR Recorder computer sound card playback to either headphones or to the audio system for play back. All connections are made with 3.5 mm TRS connections. The unit is supplied with the required cables.

The front panel has a headphone jack and the switch for selection between the phones or to broadcast over the audio system. The rear panel provides connection from the soundcard HP out and a connector is provided for the audio system. A small piece of velcro is furnished for mounting the box to the side of the monitor or desktop.

Specifications

H x W x D: 2.42" x 1.15" x 2.75"
 Color: PC BONE
